

ZORRO and ZOBO Retrofit Lamps from LUXIUM

The ZORRO series of fixtures offers a line of retrofit lamps with all the functionality of theatre instruments, available in a small PAR30 form factor for easy upgrade of existing sockets, PAR Cans and Strip lights, with wired DMX (ZR30-DX1) or wireless DMX (ZR30-AX1) control.

With an equivalent light output to a 150W incandescent, Luxium's ZORRO LED lights series is electronically dimmable and color-controllable which eliminates the need for gel filters and triac dimmers. These screw-in retrofit lamps offer a full-color range, calibrated CCT whites, and are perfect for adding color to any room or event.

The lamps can be installed in a variety of lighting fixtures with an Edison E26 screw-in base, including:

- **PAR30/38 Cans**
- **Border-lights / Strip-lights**
- **Track-lights**
- **Recessed downlights**
- **Utility lights**

Interchangeable diffusers allow for multiple beam angles. A resilient cool-to-touch housing is convenient for all stage and architectural applications.

For those looking for more simplicity and usability, Luxium's ZOBO smart LED lamp gives you control through a Bluetooth Smartphone app. This LED lamp outputs a directional beam of color-changeable light with zero latency wireless control. Beam angles from spotlight to wide flood can adapt to nearly any situation, and feature a smooth

dimming curve all the way to zero. The ZOBO is controllable in groups or individually, and includes built-in pre-set color sequences and effects.

Both series incorporate six different emitter colors and intelligent on-board control to deliver fully tunable colored light to create a full range of useful color combinations, including precise white full-spectrum blends that flatter any performance, event, or interior decoration and are especially suitable for lighting live performances and works of art.

A unique feature in both the ZORRO and ZOBO lights is the ability to select from 12 preset calibrated white colors, ranging from 2400K CCT warm 'tungsten' with a CRI > 97 to 6500K with CRI > 92. The highest light output is achieved at a 4250K setting where the lamp will produce a minimum of 1950 lumens, equivalent to a 150W incandescent bulb.

"For house of worship installations that need an easy path for upgrading their lighting, these PAR30 size LED lamps have the most compact, efficient and affordable design available for creating a dramatic theater-quality lighting experience", says Arlie Conner, founder of Luxium.

Adding efficiency, a full-range of colors, and beautiful whites to your house of worship is easy with Luxium's ZORRO and ZOBO series lights, which offer affordability and functionality with unprecedented flexibility. **T**
